

My Motto:

There are two ways to make a career:

Either one really does anything, or is claimed, to accomplish something.
My advice to the first method, because the competition here is not nearly as large.

(Danny Kaye)

Comment: Why I am quoting here so famous quote?
Because Mr. Kaye described it with nicer words than I could,
what I've noticed in the course of my professional life.
Success and to feel joy in what you are doing, enables me really to achieve something.
One of my most important properties, I work first of all because it gives me joy.
I am one of those fortunate people can pursue to the profession, which is their vocation.

Career

10,2011
until now

Continuing education, self-study

- Development of an ASP.net application for scheduling of resources.
Demo zur Veranschaulichung meiner Fähigkeiten im ASP.net Bereich
Development of my MS SQL OR mapper:
 - Porting to .Net Framework 4.0
 - Reflection technology enhancements
 - Optimization of the code refactoring with the new possibilities of the framework 4.0
 - New custom ASP.net Controls
 - Dynamic Menu and Tree Controls with shared basic business logic
 - My own Grid with Json dynamic Ajax editor, search and paging logic with better configurability
 - with highly optimized small piece of HTML code.
 - Browser-independent implementation
 - Development of several complex control structure controls on a common object.
 - Ajax / Json inline editor dialogs
 - Partial update of objects with pure Ajax
 - Development Microsoft ASP.net Membership Provider Login System
 - JavaScript Dynamic fit in browser window
 - Universal Slider technology multiple controls within a Page
- Test the application: Windows 7, Server 2003, Server 2008 R2, Server 2011 Home
Microsoft Hyper-V VM Shared Server 2008 R2 Web Edition hired to test

Technologies / applications / operating systems

Microsoft Visual-Studio 2011 Beta / 2010 / 2008
Microsoft .net Framework 2.0, Framework 3.5 Sp1, Framework 4.0, Framework 4.5
Microsoft C # programming language
Microsoft SQL-Server 2005 and 2008
Microsoft Internet Information Server to version 7.5
jQuery 1.4.1, part of Microsoft Visual Studio 2010
Javascript, Json and Ajax Technology
JavaScript, dynamic creation of HTML objects / Dialog objects from Json
Studying HTML 5, CSS3

Microsoft Office 2007
Microsoft Windows 7 Professional 64bit (development)
Microsoft Windows 7 Home (Test)
Microsoft Windows XP (Test)
Microsoft Server 2008 R2 Web-Edition
Microsoft Shared-Hyper-V VM Server 2008 R2 Web-Edition
Microsoft Home-Server 2011
Microsoft Server 2003
Virtualisierung Microsoft Virtual PC
Various browsers IE 7-9, Firefox, Chrome, Safari, Opera

Glaukos-Soft GmbH

Extensive practical hands-on experience in Workforce Planning Saarlouis

- Project **EPOSnet / edPEP / 4comPEP:**
 - Development of the concept of a new sophisticated web application
 - Development of the entire surface of the web application in the browser
 - Development of a control center for workforce planning as a Web application in the browser. The special claim of this task is far more than 20000 data clear-to-use and performance with an appealing display.
Acquisition of the entire business logic behind the control, after the departure of the employee.
 - Service for fully automated scheduling of employees.
Design / development of the business logic of the automatic planning staff.
A service implemented as a fully automatic algorithm based on the needs at timed intervals, the scheduling of employees, depending those contracts of employment, hours worked, skills performing.
 - Maintenance and development of a WCF Deployment Smart Client
WCF service with connections to the Oracle database.
 - Intensive contact with customers to develop the requirements by the customer.
 - Conceptualization and implementation of customer-specific requirements.
 - Training, leadership and guidance to new team members
 - Development of various interfaces to customer systems, in cooperation with the customer.
 - Development of various services for bidirectional data exchange with customer systems.
 - Development of data exchange via Web service interfaces with SAP.
 - Telephone customer training, and administrators at the customer.
 - First, second and third level support around the entire product.
 - Presentation and demonstration of the system in acquisition of new and existing customers
 - Technical contact for the customer, the specialists at
Acquisition of new projects and clients.
 - Installation, care and maintenance of production systems:
local in the company network
remote in data centers
remotely at the customer
In person at the customer when the remote possibilities were not given.

06.2001 **Isocom**
to **Engineers for system planning, organization and computer use at the construction**
06.2009 **Saarlouis**

- **Objects for all systems**
 - Development of a suitable OR mapper for MS-SQL Server
 - Standard objects, file handling, mail, strings, graphics, Web Controls
 - private in the recreational:
 - Development of a code generator for the OR-Mapper classes
 - Development of a code generator Forms dialogues
 - Development of a code generator ASP.net pages and user controls
- **Project eBauBude:**

On Demand Document Management System

 - Development began in 2003 and continued to develop until now.
 - ASP.NET web application with document viewer technology.
 - Development of company-specific controls
 - Development of a own grid control
 - Development of a own menu controls
 - .NET Windows Forms application with Web services.
 - Up and download of very large files.
 - Development of a pixel overlay graphics viewer with integrated drawing program.
 - Object Explorer, management of documents for a building project
 - Master Data Management:
 - employees, contractors, picture of relations company - departments - employees
 - contact details and addresses management
 - documents in the system, administration and their properties
 - Various server applications for the processing of graphics formats.
 - Application server email account query, automatically load the emails into the system
 - Application for server backup 1.7 GB data matching
 - Server application data matching addresses
 - Comparing the data with 4 other applications: shared address list.
 - The document management system became master who was able to import the addresses of the other systems.
 - The addresses were held centrally in the master and regularly transferred automatically to the client systems.
- **Project Learning Cooler:**

Web application to assist students and parents.

 - search for work sheets: school, grade levels and country dependent
 - search for work sheets: for school books
 - Development 2004 - 2007, maintaining to this day.
 - Managing users and payment, Managing the Content.
 - .NET Windows Forms applications with Web services for managing user and of the content.
 - Connection to the ondemand document management system for managing task sheets
 - Accounting / management system for the authors of the task sheets
 - Windows management application
 - Procedure: Check for authors to create teams and task / solution sheets.
